Proposal Title: Memory and Learning Tools for Students by Jim Kwik

Principal Investigator: Audrey Folsom
College of Nursing and Health Professions
Department of Clinical Laboratory Sciences

ABSTRACT

This workshop is dedicated to enhancing learning, memory, and study skills for students. Jim Kwik is an internationally known brain/memory coach. Clinical Lab Sciences students have to learn a lot of material in many classes over the course of a typical semester. This is often challenging for students who haven't mastered college-level learning skills. Attending this workshop will help me learn more strategies to teach our CLS students so that they can be successful in learning and retaining all the knowledge necessary to be a clinical laboratory scientist. These skills can be taught during our orientation day and in mini-workshops throughout the academic year. The "Kwik Student" training is 30 days, which I hope to complete this summer, in time for our fall orientation day. I am open to sharing the impact of this first round with the new study skills workshop at our national Clinical Lab Educators Conference in the Spring of 2023. I am also open to speaking at a CNHP brown bag lunch and any other appropriate event.
